

The  **AIRACK**™

Product Information

Airack™ Glass Dryer Standard

MADE IN BRITAIN 

Product Overview & Key Features

To serve the perfect drink you need a dry glass. The Airack™ will dry a basket of glasses ten times faster than leaving them to air dry on a vented shelf. The usual method in bars for drying glasses is with a cloth or towel. The Airack™ also eliminates the risk of cross-contamination that towel or cloth drying can produce, especially if the towel has been laundered with fabric softener.

The inside of the glass takes the longest to dry and air drying the inside of the glass, especially the nucleus at the base of the glass, is the correct and only practice that should be followed

The Airack™ is designed with a moulded top cover with specially positioned holes that allows the air to circulate inside the upturned warm and wet glass. The Airack™ will leave glasses at an ambient room temperature and cool to touch, resulting in the glasses being ready to use immediately.

The Airack™ comes with a drain funnel tube, automatic timer and a changeable filter.

Quick Drying Time

Air drying a standard pint glass can take up to 40 minutes. Using The Airack™ glasses can be dried 10 times faster. Push the start button and when the cycle has finished, remove the glasses from the basket and your glasses will be dry and ready for immediate use. Taller continental glasses may require more than one cycle.

Easy To Install And Use

The Airack™ is supplied with a 3 pin plug for a wall socket. The drain funnel tube should be placed into a upstand or receptacle to drain away any excess water. Simply remove the glass basket from the glasswasher, place the basket onto the top cover and press the start button. The Airack has 1 changeable filter, which can be easily removed and replaced.

Faster Glass Rotation

Do away with towels and cloths and allow The Airack™ to do all the hard work. The ambient temperature of the air flow cools the glasses as they dry which allows a quicker turnaround time.

Available In 3 Sizes

The Airack™ is available in a 40, 45 or 50 size and each size is relevant to the size of glasswasher basket being used. The 40 accommodates any basket measuring up to 40cm² or smaller. The 45 accommodates any basket up to 45cm² or smaller. The 50 accommodates any basket up to 50cm² or smaller.

Technical Specifications

Installation Requirements

Siting

Positioning should be on a sound level surface with adequate clearance for servicing.

The Airack™ can be mounted onto a purpose made basket stand providing optimum working height. It is recommended that if The Airack™ is mounted on a stand then the unit should be placed within close proximity of the glasswasher and no further than one metre from an electrical socket.

Electrical

The Airack™ is supplied with a 13 Amp plug and can be plugged into a 3 pin plug for a wall socket. The socket must be positioned within one metre of The Airack™ and be easily accessible.

Drain

A drain funnel tube is supplied with The Airack™. This is fitted to the unit to remove any excess water build-up resulting from the draining and drying process. The drain funnel tube can be placed into an up-stand or receptacle within 1 metre of the unit.
