Product Information

Chemicals

MADE IN BRITAIN 

Product Overview & Key Features

Good quality chemicals are essential for cleaning, and also aid the drying process of glasses and crockery. Clenaware warewashing chemicals not only clean glasses and dishes, but they also help to maintain and look after the glass or dishwasher. The Detergent and Rinseaid chemicals in the warewashing range are safe to use and have no adverse effects on glass decoration, equipment or delicate crockery.

Included in the Clenaware Chemical range, are not only Detergents and Rinseaids, but also extra cleaning agents. Items such as Renovate powder for renovating your glassware and helping to maintain the cleanliness of your machine, Quash Lipstick removal for all those stubborn greasy marks, Tea and Coffee Stain Remover for stubborn tannins found in hot beverages that sometimes cannot be removed in the dishwasher alone and Descaling powder used to eradicate any scale build up in your warewasher, ensuring your machine continues to perform efficiently.

A legal requirement of running a commercial kitchen is ensuring Fat, Oil and Grease (FOG) does not build up and negatively affect the local sewer system. Clenaware Grease Degradar is specially formulated and harnesses the natural power of environmental biotechnology to breakdown FOG and eliminate foul odours produced in your pipes.

Sovereign Detergent & Rinseaid

Sovereign Detergent and Rinseaid score highest on the visual brightness scale, the unique composition of both the Detergent and Rinseaid helps to eliminate spotting, reduces build up on glass surfaces and therefore minimises problems with head retention, lacing and gas break out in beers and lagers. These chemicals are specially formulated for cabinet glass washing and can handle high levels of proteins and tannins in the water and dirty glassware.

Renovate

Renovate Powder has been specifically formulated for Clenaware to especially remove any chemical residues left behind after washing and rinsing. By renovating your glassware once a month, it will maximise the head retention and lacing characteristics of beer and lager, since a build-up of rinseaid or mould release agents can rapidly collapse the beer head.

Dishwasher Detergent & Rinseaid

Dishwasher Detergent and Rinseaid has been specially formulated for cabinet dishwashing. The detergent is suitable and effective in hard water areas due to its chemical composition, and when used in conjunction with the dishwasher Rinseaid, you ensure streak-free, sparkling crockery and cutlery.

Treatments

Chemical items such as Quash Lipstick Removal, Descaler and Tea and Coffee Stain Remover have been developed to help with shifting stains and tannins that sometimes cannot be removed by using your warewasher alone. Chemical products such as Descaler will also help to eradicate the build-up of scale in the warewasher to ensure your machine continues to perform efficiently. To help in the breakdown of Fat, Oil and Grease (FOG) and the elimination of foul odours, Clenaware Grease Degradar can be used in your kitchen drains to keep them clean and free-flowing whilst reducing the risk of downtime or costly repairs.

Technical Specifications

| | Sovereign Detergent | Sovereign Detergent | Sovereign Rinseaid |
|----------------------|---------------------|---------------------|--------------------|
